About me

I am a passionate Web and Mobile Developer with a strong foundation in building dynamic and responsive applications. I thrive on challenges and am constantly eager to learn and adopt new technologies to stay at the forefront of industry trends. My commitment to continuous learning and my ability to adapt quickly make me well-equipped to tackle any development task and contribute effectively to a forward-thinking team.

Experience

- **Software Engineer Intern** — ***Simsyn Pvt Ltd - CRM Management System*** — ***Nov 2025 - Present***

Currently working as a Software Engineer Intern at Simsyn Pvt Ltd, contributing to the development of a comprehensive CRM management system. Gaining hands-on experience in modern full-stack development with microservices architecture while collaborating with cross-functional teams to deliver scalable enterprise solutions.

- Developing and maintaining web applications using React with TypeScript and Redux Saga for state management.
- Working with microservices architecture on the backend to ensure modularity and scalability.
- Implementing efficient data management solutions using PostgreSQL database and Redis for caching.
- Participating in code reviews, testing, and debugging to ensure high-quality software delivery.
- Collaborating with senior engineers to learn advanced development techniques and software architecture patterns.

Technologies used: React, TypeScript, Redux Saga, Node.js, Microservices, PostgreSQL, Redis, Prisma ORM, and Git

- **Software Engineer (Frontend Developer)** — ***mybawbaw - Veterinary Appointment system*** — ***Dec 2024 - Jun 2025***

Worked alongside senior university developers on a web application that allows veterinarians to register their profiles and hospitals while efficiently managing appointments. Gained valuable hands-on experience in full-stack development through mentorship and collaborative problem-solving.

- Developed and maintained frontend components to ensure a smooth and scalable user experience.
- Connected .NET backend services with React-based frontend applications to ensure seamless data flow and enhanced user experience.
- Learned industry best practices and advanced development techniques through close collaboration with experienced team members.

Technologies used: React, JavaScript, .Net, PostgreSQL and Firebase

Education

- **University of Colombo School of Computing** — *Colombo, Sri Lanka*
  Bachelor of Science - Computer Science (3rd year) CGPA/Percentage: 3.01/4.00 — ***May 2022 - Present***
- **Telijjawila Central College, Telijjawila**
  G.C.E. Advanced Level Results - Physics: A, Chemistry: A, Maths: B — ***2013 - 2021***

Projects

- **Travel.lk - Developed a web application with AI-powered trip creation** — ***Apr 2025 - Oct 2025***

Travel Planning App Created a web application enabling users to plan trips, find and request guides, rent vehicles with/without drivers, and book hotels. Built as an all-in-one travel solution with integrated booking and communication features. (3rd year group project)

– Technologies used: React Js, SpringBoot (Java), GroqAI, Python, PostgreSQL and Firebase

- **Musicia - Music event management and ticket selling platform** ***Jun 2024 - Apr 2025***

  Built a comprehensive event management system allowing music event organizers to create, customize, and publish events with venue selection, date/time scheduling, multiple ticket types, restrictions, performer bookings, stage and sound equipment coordination, and integrated ticket sales platform for attendees. (2nd year group project)

  – Technologies used: HTML, CSS, JavaScript, PHP, MVC

- **JobListings - Job Finding and Posting Platform** ***Jan 2023 - Apr 2023***

  Built a job marketplace platform with employer job postings (part-time/full-time/contract) and job seeker tools including search job oppertunities, saved listings, chat with poster. Implemented secure authentication, role-based access, and responsive design for cross-device accessibility.

  – Technologies used: React, Express, NodeJs, MongoDB

- **Food Ordering System (self learning project)**

  Enhance a complete food ordering platform with restaurant admin panel for menu management, order tracking and customer app for browsing, ordering, and real-time order tracking.

  – Tools & Technologies used: Flutter, Firebase

Skills and Interests

Languages: Dart, Python, PHP, Java, HTML, CSS, JavaScript, C and C++
Frameworks: Flutter, React JS, Spring Boot, .Net, React Native, Node Js, Tailwind CSS
Databases and ORMs: MySQL, SQLite, PostgreSQL, Firestore, MongoDB, Chroma, Prisma ORM
Tools: VSCode, Android Studio, Git, Postman, Copilot, Sourcetree
Other Technologies: Git, Linux, Figma, Jira
Soft Skills: Communication, Problem-solving, Time management, Adaptability, Teamwork and Leadership
Areas of Interest: Mobile Development, Web Development, AI Engineering

Certificates

- **Data Structures and Algorithms Certification ,** Great Learning
- **Database and SQL Course Certification ,** Great Learning
- **AWS Educe Introduction to Cloud,** Amazon Web Services (AWS)

Extra-Curricular Activities

- **Volunteer Experience :** UCSC Career Fair 2024
- **Participated in inter-faculty games:** Elle, Volleyball, Swimming, Athletic, Beach Volleyball, Base Ball

Other Interests

- **Interests:** Web Development, Mobile App Development, Attending Hackathons, Sports&Fitness
